

Keeper Technology® is hosting the Arcitecta® Mediaflux® software on a virtual machine infrastructure in our Ashburn, Virginia offices. Access to the Mediaflux desktop environment for two users is provided using the following information:

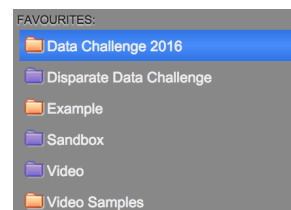

Site URL: <http://50.245.231.210/nga>

Login:

Domain:	nga	Domain:	nga
Username:	john.smith	Username:	jane.smith
Password:	7d6rSA&6dr6!s	Password:	a^4rDf@3wi2_u

User documentation is available by double-clicking on the “Reference Books” icon in the upper left corner. The most relevant document for this use case is the “Mediaflux Desktop” reference information which will describe interactions with the user interface that is provided.

While viewing the “Asset Finder” file browsing utility, data previously loaded into the Mediaflux environment is viewed through the “Data Challenge 2016” favorites link on the left hand side. A duplicate set of un-ingested data may be found via the “Example” favorite link.

The provisioned users have read-only access to all visible information with read/write access to the “Sandbox” folder. Dragging data from the “Example” folder structure to the “Sandbox” folder structure will allow the user to see the ingest process. Simply select the “NGA” package when ingesting.

Assistance with this configuration and other processes may be obtained by opening up a ticket through <https://support.keepertech.com> (please register for an account). Support will be available M-F 8 am through 5 pm EST for this demo environment.

Keeper and Arcitecta are also available for a live walk-through of the interface via WebEx – please contact dave.donald@keepertech.com to schedule.
