Access & Circulation

My proposal creates a diversity of space and uses for the public which will host recreational, cultural, and community for all ages. San Francisco Federal Building is a rigid sharp building that shows strong independence from the surrounding buildings. Thus, the idea of bringing a smoother flow through the community by creating individual open space for tenants, children, workers, and tourists. The idea comes from the alignment of a grid from the Federal Building and the Honey Bistro. Moreover, the alignment has created a unique space with slopes and hills; thus, this will create an environment for all ages to gather around and coexist.
