Dear Dr. Kassakian,

I am writing this letter of intent to express our interest in partnership with you and your co-founders as you develop pediatric vaccination application, VaxApp. As you are aware I am a community based pediatrician and partner in a multi-specialty practice. From our discussions I think you have clearly understood the frustrations of front-line physicians regarding the poor support for our work and general difficulty of using electronic health records (EHRs). In particular, the administration of pediatric vaccinations is one of the foundations of pediatric medicine and vaccinations themselves are considered one of the greatest achievements of science. However, they receive such minimal support and attention in the EHR that we often require the use of outside references and other resources to provide good care. Ever since our group started using the EHR we have been disappointed that such a key aspect of our work has received such minimal attention from the EHR vendors.

As a group of pediatricians we are constantly asking why our EHR can't help us do this or why it can't do that and the answers, while often difficult to understand, are universally frustrating. I have enjoyed being an informant in helping shape your design and plans. I have enjoyed the process of participating and helping to contribute to your application. In particular, the process of going from me discussing my workflow and my unmet needs, to you asking all manner of question regarding different possibilities to watching my frustrations and needs come together in your design and mock-ups.

I look forward to continued participation in your development and we look forward both to being available to provide feedback on the test version as your application gets developed and if feasible we would be excited to provide a live pilot environment.

Sincerely,

Mary Lee Baker MD
