

Boldline Religious Freedom

Steven Spielberg and I proposed the presidential directive for Rules for Freedom of Religion in the Federal Workplace to Bill Clinton, July 1972, Implemented December 1996.

Hope you feds at State liked them.

1. Nicholson Science, 2604 W JETTON AVE TAMPA, FL 33629-5325
2. FOR-PROFIT AND LOTS OF IT! We expect 4 million dollars for this.
3. Industry affiliation: HEALTH CARE ANTI-ISIS
4. www.independent.academia.edu/BubbaNicholson
5. Has your organization ever partnered with the U.S. government? No. We have, however, been investigated more than a dozen times. Thank-fully, no charges were ever filed. (Due to “border wall” aversive sub-pheromone which must be removed from the healthy adult male facial skin surface lipid pheromone which we normally pass in kissing. The pheromone is gotten by kissing one’s father at day’s end as children.
6. What stage is your partnership business plan? We are ready to go at scale.
7. We commit to participate in the full three-day accelerator program in or around Washington, D.C.

Proposal Information: *Jihadist wacky everything up. I met Sheik Mohammed (Mo, now at Guantanamo) in 1997 at the Chicago Theological Seminary. The 9-11 mastermind was a very polite young man, but fiendishly obsessed with hatred for Jewish people, which was strange, since he didn’t know any. I was doing my OBGYN medical school rotation at a nearby hospital and decided to try to help this troubled young man. His friend was M. Night Shyamalan who also sought me out at the Seminary’s dorm with similar dreams of conquest and glory, sent by Steve Spielberg—the father of my Kennedy Clinic physician, Sheena Spielberg, MD. I decided upon a contest between the two young men as an anecdotal trial.*

The contest: provide 250mg of healthy adult male facial skin surface lipid pheromone to one, to the other, placebo. Then use my genius to enable their fondest schemes. For M. (obviously not Shyamalan’s real name, but I think it was also Mohammed), I provided stories, speeches, dialog, and some written props for films. For Mo, I provided combat scenarios against the United States for Arab movies. I told him how to contact NASA for overflight information for the STS (he said he wanted to shoot down the shuttle with the Israeli astronaut on it, and I was certain that the space shuttle would be flying faster than bullets or that NASA would become suspicious enough to investigate), and the ideas for the 9-11 attacks. a)

train to fly an airliner (first with Microsoft software) with Saudi education funding via his associate, yet another Mo, who was a minor member of the Saudi royal household. b) practice flying on airliners c) practice the slicing of throats Hilal on goats in Afghanistan using box cutters and d) using 3 airliners at once in simultaneous attacks on the Capitol, NYC's twin towers (his uncle had attacked that garage already), and the Pentagon. (V for Vendetta's opposite, basically.) I somehow got the misperception that Mo was going to make a film like M. M. got the pheromone, Mo the placebo. I gave M. the stories for 6th Sense, Unbreakable, Signs, and The Village (my headstone appears on-screen, with the wrong (throw-off) year). I got worried about Mo, he tried to scam me! As I didn't have any evidence, and he thought I'd said Nelson instead of Nicholson, I let him keep the misperception and gave him "David" as a first name instead of my real name. Lucky thing or I'd be in Gitmo next to his sorry backside.

Problem Statement: *Make the jihadists all give up. Hey, some things are really easy if you're really, really smart like I am.*

Idea: *Provide the jihadist with odorless, colorless, tasteless human pheromone on a fresh, new, un-chewed, chewing gum vehicle. The pheromone will relieve their "feelings of jihad". We must remove volatiles from the chewing gum because methyl esters of fewer than 10 carbons are aversive pheromone for human beings.*

Resource Requirements: *You will need a few cases of Wrigley's #5 Rain sugarless chewing gum, some UV lamps (\$25 at CVS drug stores), a means of volatile collection (lab set up), a supervising Institutional Review Board for Human Subjects IRB at USDS, eventual collaboration with INTERPOL and other police agencies intercepting returning jihadists, and collaboration of healthy adult males within the US Department of State.*

Best Potential Partners: *Describe ideal partners (from 2-10). You need a source of pheromone (healthy adult male volunteers) from the USDS. You need jihadists, suspected jihadists, and potential jihadists via ordinary police contact.*

Ideal End State: *Each jihadist will be given 15 pieces of chewing gum to chew (as in detention?) The pheromone cures anti-social and psychopathic urges within 8 seconds, giving the now former jihadist a slight observable "lift". The pheromone also alleviates a long list of other behavioral ills (criminal behavior, delinquency, borderline personality disorder ADHD, ADD, OCD, onychophagia, PTSD, opioid addiction. Opioid addiction is*
