

## **LITTLE BOB'S STORMY STIR UP**

**FOREST PARK OHIO. BIG BOB and LITTLE BOB are having a friendly discussion at their home.**

**BIG BOB**

Oh, I didn't see you there!(waves hands) I am from Forest park Ohio. That's located right here. (Shows on map). Forest park is not a city known for it's tornadoes, but that does not mean it isn't at risk. According to homefacts.com, there is an average of two tornadoes per year.

**LITTLE BOB**

That's not a big number. Why should I even be worried?

**BIG BOB**

No matter the frequency or intensity of tornadoes, precautions need to always be taken seriously.

**LITTLE BOB**

What do you mean?

**BIG BOB**

Tornadoes are measured from a F0 - F6 fujita scale. A F0 tornado is of the weakest intensity while F6 is of the strongest intensity. A tornado may appear to be weak at first but it may grow stronger. This is why we need to be safe when there are tornado warnings.

**LITTLE BOB**

How can we be safe?

**BIG BOB**

Well, first you must be serious when you are practicing tornado drills at school. That way you can be prepared when a real one happens. Secondly make sure that your family is equipped by having first aid kits. Thirdly stay away from windows to avoid major injuries.

**LITTLE BOB**

How are you helping family, friends and your community to protect their health during a tornado?

**BIG BOB**

By raising awareness and spreading this message.
